

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Currently amended) A method of integrating billing and services management between a wireless telecommunications carrier and a wireline telecommunications carrier, comprising;

provisioning a call unit sharing plan allowing a user to charge units of wireless usage and units of wireline usage to one calling plan;

receiving wireless usage ~~call data records (CDR)~~ at a wireless carrier;

receiving wireline ~~CDRs~~ usage at a wireline ~~CDR~~ usage rating platform;

routing the wireless ~~CDRs~~ usage to the wireline ~~CDR~~ usage rating platform; and

if any of the wireless or wireline ~~CDRs~~ usage requires a billing charge, charging any of the wireless or wireline ~~CDRs~~ usage to the call unit sharing plan.

2. (Currently amended) The method of Claim 1, further comprising preparing a single periodic bill showing charges to the call unit sharing plan associated with the wireless and wireline ~~CDRs~~ usage charged to the call unit sharing plan.

3. (Currently amended) The method of Claim 1, prior to charging any of the wireless or wireline ~~CDRs~~ usage to the call unit sharing plan, rating ~~each the~~ the wireless and wireline ~~CDR~~ usage at the wireline ~~CDR~~ usage rating platform to determine whether ~~each CDR~~ any of the wireless or wireline usage must be charged to the call unit sharing plan.

4. (Currently amended) The method of Claim 3, further comprising determining whether any of the wireless or wireline usage is ~~wireless CDRs or wireline CDRs~~ are associated with calling types requiring no charge.

5. (Currently amended) The method of Claim 4, whereby if any of the wireless or wireline usage is ~~wireless CDRs or wireline CDRs~~ are associated with calling types requiring no

charge, designating ~~those wireless CDRs or wireline CDRs~~ the any of the wireless or wireline usage associated as requiring no charge.

6. (Currently amended) The method of Claim 4, whereby ~~one or more~~ at least some of the wireless CDRs usage requires no charge because a wireless call associated with the ~~one or more~~ at least some of the wireless CDR usage requiring no charge was made during a free call period or a different rate call period.

7. (Canceled)

8. (Canceled)

9. (Canceled)

10. (Original) The method of Claim 9, after preparing a single periodic bill, further comprising:

settling revenue associated with the single periodic bill between the wireless carrier and the wireline carrier by apportioning an amount of the revenue associated with wireless services during a billing cycle associated with the single periodic bill to the wireless carrier; and

apportioning an amount of the revenue associated with wireline services during the billing cycle associated with the single periodic bill to the wireline carrier.

11. (Currently amended) In a telecommunications system including integrated billing management between a first telecommunications services carrier and a second telecommunications services carrier, a method for synchronizing services between the first and second telecommunications services carriers, comprising:

receiving a services order at a first services ordering platform of the first telecommunications services carrier requiring services changes that affect the second telecommunications services carrier; and

~~activating one or more application programming interfaces (API) to cause a data call from the first services ordering platform to a second services ordering platform of the second~~

~~telecommunications services carrier to~~ notifying the second telecommunications services carrier to provide the services order to the second telecommunications services carrier.

12. (Currently amended) The method of Claim 11, further comprising ~~monitoring a subscriber's services subscription at the first telecommunications services carrier and at the second telecommunications services carrier by a bundle integrity manager (BIM) to ensure~~ ensuring that subscriber services at the first telecommunications services carrier are synchronized with subscriber services at the second telecommunications services carrier for any subscriber services affecting both the first and second telecommunications services carriers.

13. (Currently amended) The method of Claim 12, further comprising ensuring ~~by the BIM~~ that no subscriber services changes are made at the first telecommunications services carrier affecting the second telecommunications services carrier if a responsive services change is not made at the second telecommunications services carrier.

14. (Currently amended) The method of Claim 12, further comprising if a services change is made at the first telecommunications services carrier affecting the second telecommunications services carrier without making a required responsive services change at the second telecommunications services carrier, ~~causing the BIM to~~ notifying the second telecommunications carrier of the services change at the first telecommunications services carrier.

15. (Canceled)

16. (Original) The method of Claim 11, further comprising sending an integrated fulfillment notification to any subscriber making services changes with either the first telecommunications services carrier or the second telecommunications services carrier where the services changes affect both the first telecommunications services carrier and the second telecommunications services carrier.

17. (Currently amended) A system for integrating billing and services management between a wireless telecommunications carrier and a wireline telecommunications carrier, comprising;

a wireless carrier billing system operative

to receive wireless call usage data records (CDR) associated with wireless calls made via the wireless carrier;

to route the wireless call usage CDRs to a CDR call usage rating platform at the wireline carrier;

the CDR call usage rating platform at the wireline carrier operative

to receive wireline call usage CDRs associated with wireline calls made via the wireline carrier;

to charge any of the wireless or wireline call usage CDRs to a subscriber call unit sharing plan if any of the wireless or wireline call usage CDRs requires a billing charge;

to route rated call usage CDR information for all wireless and wireline call usage CDRs requiring billing under the subscriber call unit sharing plan to a wireline carrier billing system; and

the wireline carrier billing system operative

to prepare a single periodic bill showing charges to the subscriber call unit sharing plan associated with the wireless and wireline call usage CDRs charged to the call unit sharing plan.

18. (Canceled)

19. (Currently amended) A method of integrating billing management between a wireless telecommunications carrier and a wireline telecommunications carrier, comprising;

provisioning a call unit sharing plan allowing a user to charge units of wireless usage and units of wireline usage to one calling plan;

receiving wireless usage call data records (CDR) at a wireless carrier;

receiving wireline usage CDRs at a wireline usage CDR rating platform;

routing the wireless usage CDRs to the wireline usage CDR rating platform;

rating ~~each~~ the wireless and wireline usage CDR at the wireline usage CDR rating platform to determine whether ~~each CDR~~ any of the wireless or wireline usage must be charged to the call unit sharing plan

if any of the wireless or wireline usage CDRs requires a billing charge, charging the any of the wireless or wireline usage CDRs to the call unit sharing plan; and

preparing a single periodic bill showing charges to the call unit sharing plan associated with the wireless and wireline usage CDRs charged to the call unit sharing plan.

20. (Canceled)

21. (Canceled)

22. (Original) The method of Claim 21, after preparing a single periodic bill, further comprising:

settling revenue associated with the single periodic bill between the wireless carrier and the wireline carrier by apportioning an amount of the revenue associated with wireless services during a billing cycle associated with the single periodic bill to the wireless carrier; and

apportioning an amount of the revenue associated with wireline services during the billing cycle associated with the single periodic bill to the wireline carrier.

23. (Currently amended) A method of integrating billing management between a plurality of telecommunications services systems, comprising;

receiving first call usage data records (CDR) associated with calls transacted via a first services system;

receiving second call usage CDRs associated with calls transacted via a second services system;

routing the first call usage CDRs and the second call usage CDRs to one or more call usage CDR rating platforms;

at the one or more call usage CDR rating platforms, determining billing information associated with each of the first and second call usages CDRs;

routing billing information associated with each of the first and second call usages CDRs to a billing system; and

preparing a single periodic bill showing charges associated with the first and second call usages CDRs.

24. (Currently amended) The method of Claim 23, whereby routing the first call usage CDRs and the second call usage CDRs to the one or more call usage CDR rating platforms includes routing the first call usage CDRs to a first call usage CDR rating platform and routing the second call usage CDRs to a second call usage CDR rating platform.

25. (Currently amended) The method of Claim 23, whereby routing the first call usage CDRs and the second call usage CDRs to the one or more call usage CDR rating platforms includes routing the first call usage CDRs and the second call usage CDRs to a single call usage CDR rating platform at one of the first ~~or~~ and second services systems.

26. (New) A method of integrating billing and services management between a wireless telecommunications carrier and a wireline telecommunications carrier, comprising;

provisioning a call unit sharing plan allowing a user to charge units of wireless usage and units of wireline usage to one calling plan;

receiving wireless usage at a wireless carrier;

receiving wireline usage at a wireline usage rating platform;

receiving the wireless usage at the wireline usage rating platform; and

if any of the wireless or wireline usage requires a billing charge, charging any of the wireless or wireline usage to the call unit sharing plan.

27. (New) The method of Claim 26, further comprising preparing a single periodic bill showing charges to the call unit sharing plan associated with the wireless and wireline usage charged to the call unit sharing plan.

28. (New) The method of Claim 26, further comprising prior to charging any of the wireless or wireline usage to the call unit sharing plan:

rating each wireless and wireline usage at the wireline usage rating platform to determine whether any usage must be charged to the call unit sharing plan:

determining whether any wireless usage or wireline usage is associated with calling types requiring no charge; and

in response to any wireless usage or wireline usage being associated with calling types requiring no charge, designating the any wireless usage or wireline usage requiring no charge as requiring no charge.

29. (New) A method of integrating billing and services management between a wireless telecommunications carrier and a wireline telecommunications carrier, comprising;

provisioning a call unit sharing plan allowing a user to charge units of wireless usage and units of wireline usage to one calling plan;

receiving wireline call usage at a wireline rating platform;

receiving wireless call usage at the wireline rating platform;

if any of the wireless or wireline call usage requires a billing charge, charging the any of the wireless or wireline call usage requiring a billing charge to the call unit sharing plan; and

preparing a single periodic bill showing charges to the call unit sharing plan associated with the wireless and wireline call usage charged to the call unit sharing plan.
